This book works with Windows, OS X, and Linux. If you're working with a Mac, refer to the box on Working with Different Operating Systems. If you're working on a PC, we recommend Windows because it is the most popular operating system and is the recommended platform for Photoshop. Although the latest version of Photoshop offers support for large canvases and high resolution images, earlier versions (CS3 and CS2, for example) required smaller canvases and lower resolution images. If you're working with large files — in the sense that the size of your image exceeds the normal disk space available for the program — you have to work with a smaller canvas in the background and then drag the image into the foreground. When you work with large files, we suggest that you work in a separate background workspace, use the zoom function, and work at 100 percent to keep the file size reasonable. You can also drag images to a separate layer (see Chapter 3) and then make any edits there. We hope the following pages provide enough information and tutorials to help you get started. Finding the keyboard shortcuts for Photoshop Every program has its own keyboard shortcuts that you find either on a menu or when you access the menu. They're an essential part of how you use the software. After you install Photoshop, you'll find the appropriate shortcuts on the keyboard shortcuts or menus at the top of the Photoshop workspace. * * * Warning: Overkill Photoshop can be overwhelming when you're new to it. So we strongly recommend that you work with this book in front of a tutorial that illustrates the features you need and gives you a simple but effective approach to creating your images. * * * To get you started quickly, we offer a few of the most important shortcuts in Table 5-1. Some of these shortcuts you'll find on the menus, and others you'll find buried in the keyboard shortcuts or menu. Remember that you can change them by pressing the Alt key to invoke the menus, pressing Control to invoke the keyboard shortcuts, or Control + Shift to invoke the menu items. Table 5-1 Some Photoshop Shortcuts Action | Shortcut --- | --- Zoom In | Ctrl++ Zoom Out | Ctrl+– Zoom to Fit Canvas | Ctrl+Z Pan for Reflection | Spacebar Pan for Depth of Field | P Move to Previous Layer |

The idea of cryptocurrency first began in the late 1980's. The idea was for a currency that could be sent untraceably and in a manner that did not require a centralized authority. The idea is simple; the only way you can know if a message has been intercepted, is if you check every single copy of every single message. For this reason, the original idea of cryptocurrencies was to have a network of independent actors, performing a function that is similar to the function performed by banks today, but without the role of regulators. The difference is that the cryptocurrency network functions independently of a centralized entity. David Chaum's anonymous cryptographic electronic money Digicash was designed for this purpose. It required a participant to dedicate computer power to solving cryptographic puzzles. Those who solved the puzzle received the reward. If you put Chaum's and Szabo's concepts together, you have something that resembles Bitcoin. However, Szabo could not solve the puzzle of the double-spending problem without the use of a central authority, and so it was not until a decade later when a mysterious person or persons, using the pseudonym Satoshi Nakamoto, published a white paper called Bitcoin – A Peer to Peer Electronic Cash System, that the history of Bitcoin and its successors began. Bitcoin has been the most successful cryptocurrency to date, and is often considered the first cryptocurrency. As of February 2020, the market cap for all cryptocurrencies has surpassed the US$500 billion. The History of Bitcoin (2008-2010) On October 31, 2008, Satoshi Nakamoto published the white paper called Bitcoin – A Peer to Peer Electronic Cash System, describing the functionality of the Bitcoin blockchain network. Satoshi Nakamoto mined the first block of the Bitcoin network on January 3, 2009. Satoshi embedded the headline of the newspaper The Times on the first block in order to permanently refer to the economic preconditions that lead to the technology of Bitcoin. This first block of 50 Bitcoins is now referred to as the Genesis Block. Bitcoin had almost no value for the first few months of their existence. On April 10, 2010, the price of one Bitcoin was less than 5 cents. On May 22, 2010, the pizza was bought. On January 3, 2011, it surged to 42 cents. On November 9, 2011, it dropped back to 11 cents. By early February the price had rebounded to 29 cents. Bitcoins, an entirely new creation. Bitcoin is an entirely 05a79cecff

Q: Can we really write a "draft" paper and get it reviewed? I have to write a review for my senior project and I was thinking that most of the time, I spend a lot of time writing a draft and then putting it on the internet. Is there any reason to do it this way when we can use a "real" peer review process? A: You can do this, and I do this for classes, both for my personal writing, and for research purposes. You should have some readers that actually read and give constructive feedback on your paper. If you put it up online, there are some things about your writing that you won't catch, and by putting it on-line, there is some sort of a "halo effect" that makes the review seem more positive. However, note that more readers do not mean better comments. If something is in that paper, that you were searching for feedback on, and you can't get the feedback you need on that point, the paper will not improve. Jørn Utzon and New Sydney Opera House Jørn Utzon was an accidental architect. He became a famous one, however, with the Sydney Opera House. This piece of architecture is a priceless work of art that has captured the imagination of the world. Sydney Opera House's design is refreshingly inventive and well thought out. It is a lesson to all architects. Below are the four decades in which it was built. Utzon's parents were Danish architects, who left the country in the 1930s and moved to Sweden, where they practiced until Utzon was twelve. This type of upbringing obviously had a great influence on him. At the age of fourteen, Utzon entered the renowned Royal Academy of Fine Arts in Stockholm. He made his dreams of a career as an architect come true, but it wasn't to be. Utzon had entered the programme with the hope of gaining admission into the graduating class, but his application was rejected. It was not only the difficulty of having his application rejected, but also the fact that his father was not able to pay his tuition fees. Utzon moved back to Denmark in 1943, and began to study architecture with private tutors and as a research assistant. He set up a reputation of his own as an architect, but had very little formal training. His best chance at gainful employment was to get a job with the Danish State Railway, which did not

very nearly a whole biscuit by himself." "Let's go home." "Much as I'd like to see what a dog can get away with, there's nothing here worth eating." " No, no." " Look at this." "Well, hello, Sargent." "You've been keeping yourself busy, haven't you?" "Is that what you were doing?" "Trying to prove a point?" "Three things in life I can handle:" "knowing nothing, knowing all I need to know, and staying out of others' way." "But you've tangled me up in all of your little schemes." "It's true." "He was only doing his job as school board president." "I've got enough trouble with my own patients." "I can't afford to get involved in other people's." "Hmm." "It doesn't stop with Bowden." "The mischief you've all been getting up to in this village-- it can't go unpunished." "You don't scare me, Dr. McCordle." "Oh, you should." "You should be scared." "Dr. McCordle?" "Oh, Nathan." "How's it going?" "Couldn't be better." "Never could." "He had every intention of being the best dentist in town and I just had to step in and show him what a horrible idea that was." "Somewhere along the line, we became friends, didn't we?" "It's a great deal more than that." "Then why do you want to stay with him?" "I'm not sure I want to, but I can't leave him." "He's ill." "He's dying, Nathan." "I'm afraid the last few years will be difficult for him." "Oh, I didn't know." "Well, it's no wonder he misses the old ways." "He's probably never known anything but a respected dentist." "If you ask me, he's been too nervous and uptight to enjoy himself." "It's time he had a good laugh." "Amen to that." "Would you... would you do something for me?" "I'd like to give him one of my medallions." "Me?" "It sounds childish, but, um, I've always thought of him as my father." "I know just the place." "Do you think he'll like it?" "I'm sure he will." " Oh, and he could put it on
