Keymacro is a clipboard-style Mac clipboard manager. It can make long text snippets that you can paste into any other app without having to worry about long pasting times or clunky cut and paste operations. With Keymacro, you can just

press a hotkey (or combination of hotkeys) to create a short text snippet that you can paste anywhere with a simple double click. Keymacro works seamlessly with the Mac OS X clipboard (although it will work with the Windows clipboard as well). Keymacro will store and automatically paste your snippets to the Mac OS X clipboard. You can assign hotkeys to any snippet you make, including snippets that contain special characters. The full text of the snippets are stored and can be edited later. Keymacro stores its snippets in Keymacro's own text format, which is a basic text file format, just like Notepad. It is an easy format that allows snippets to be copied directly to the clipboard without the need for special paste applications, and can be easily imported into other apps. Keymacro also has a Mac-style "registration" process that allows it to be installed on the Mac OS X clipboard and used with any other app on the Mac OS X system. NOTE: The full text of the snippets are stored and can be edited later. All of Keymacro's features are free and open source. (source: MacUpdate) Installation: Open the dmg downloaded file. Double click the Keymacro Install.app file. Click "Open" in the Disk Utility window. Click "Install" in the Install Mac OS X screen. System Requirements: Mac OS X version 10.4.11 or newer Processor: Intel G4 or newer Hard Disk Space: 2 GB RAM Note: The full text of the snippets are stored and can be edited later. What's new in this version: - Enhancements and bug fixes. What's new in version 2.0.0: - Removed support for Mac OS X version 10.4.11 or older.
